I am disturbed that I find it important to contact the FCC for the second time this year concerning FCC regulation of radio content. This time it is due to petition 04-160. This petition is a act of desparation by the NAB. They cannot generate programing that audiences want, so they are trying to limit the programing of those that are providing useful programing. Satellite Radio is a fee based service - It is not a public airwaves broadcast. The fact that the NAB feels threatened is just too bad - they should provide content that listeners want; but they don't so they are trying to keep subscribers to satellite radio from receiving what they are paying for. If this petition is approved it WILL NOT INCENT ME TO GO BACK TO PUBLIC BROADCAST RADIO. They will gain nothing but to have the satellite customers dislike the broadcasters even more. Satellite customers chose to subscribe to the service because of the offering. NAB has no right to interfere with satellite radio providers as it is a very different business and if the NAB does not like the competition they should improve their product - not force satellite radio to limit their offering. I urge you to see this petition for what it is - an attempt to limit the competition because the subscribership has hit a level that the NAB feels has become a threat to their one time monopoly. Our economy is based on competition - public airwave radio had none - until now. They should not be allowed to limit the business of the satellite services providers. Satellite radio provides me with the information and entertainment that I need and appreciate. The product and service provided by NAB radio does not meet my needs. They need to improve their product, not seek the regulation of the competition. Please deny this petition, there is no reasonable grounds for this to be granted. This petition is anti-commerce and is unAmerican.
